

Landquip

Retro-fit Alu-light Booms

The *Alu-light* range of aluminium booms from 16-48m can be fitted to most makes of sprayer - mounted, self propelled or trailed, - at a fraction of the cost of a new sprayer

Simple upgrading to a high specification boom can be carried out, or a complete re-build if required. We will be able to assist with expert advice, particularly if you are considering a larger boom width, eg. checking pump capacity, hydraulic services, nozzles, and offering advice on electronic control systems.

For those wishing to carry out their own installation, we can supply not only the boom, but any ancillary components, e.g. manual or electro-hydraulic spool blocks, electric in-cab controls, volume control or electronic rate governing systems, chemical incorporators, tank washing systems, rowcrop and flotation wheel options, nozzles and fitting, etc.
